

Team Meeting Notes

Date: October 5, 2026

Scrum Master this week: Sanya Zuberi

Attendees: Sanya Zuberi, Thywill Lorage, Yaswanth Balaji Baditha

Project Context

- 12 total tasks, completed roughly one per week, each person working independently with their own approach.
- Notes are shared in the team WhatsApp group; uploading to GitHub by the Scrum Master.

Task 01: EV Charging Demand Forecasting

Sanya

- Built and compared Prophet, SARIMA, and XGBoost for both session count and energy demand.
- Found a data quality issue with charger installation dates and documented it rather than dropping affected rows.
- XGBoost performed best overall but couldn't extrapolate future trends. Prophet was kept alongside it in the final dashboard for that reason.
- Status: complete, uploading to GitHub.

Thywill

- Also close to finished on Task 01.
- Independently flagged the same installation-date issue.

Yaswanth

- Currently learning Python and Power BI as a starting point for the project.
- Working on Task 01.

Next Meeting

- Same time, next Monday (tentative).

Note:

- Due to connectivity issues faced by some of the members, the meeting was concluded early.
- The team was complete with the fourth member when this task was started. After their leave, the team decided to continue without the fourth member and leave that vacancy open for anyone willing to join.
